

Vent heaters attach onto the outlet exhaust bayonet of cryovent devices to prevent ice build-up where cold gas exits the device. They are intended for outside terminations but can be considered for inside terminations with large open areas that provide adequate air exchange rates (consult local ordinances for final guidance).

Features:

- The stainless steel pipe housing protects personnel and equipment from the heating element
- Various bayonet connection/sizes available
- Adaptable with vacuum insulated vent lines to route gas to roof or exterior wall

Benefits:

- Warming the cold gas eliminates safety hazards associated with ice or moisture buildup
- Eliminates mold growth or T-bar ceiling damage associated with moisture or ice

Technical Data:
